Full UK Driving Licence | NVQ Level 3 Electrical & Electronic Engineering (City & Guilds) — In Progress

PROFESSIONAL PROFILE

Electrical and Power Systems Engineer with over 5 years of field experience working on high-voltage substations (330/132kV), telecoms power infrastructure, transformer installations, solar PV deployments at BTS sites and data centres, and building services maintenance. The bulk of my career has been hands-on work: time in control rooms at TCN carrying out HV switching and testing protection relays, followed by installing DC power systems and commissioning solar sites across telecoms infrastructure with Pilot Science. Alongside that, I have taken on coordination and supervisory responsibility on multi-site projects, managing field teams and liaising with regulators and clients. I hold a Master's degree in Robotics and Automation, a Full UK Driving Licence, and I am working towards NVQ Level 3 in Electrical and Electronic Engineering through City and Guilds.

WORK EXPERIENCE

Maintenance Engineer (Electrical Bias)

Oldham Metropolitan Borough Council | Manchester, UK | *November 2024 to Present*

Field Work

- Carry out planned preventive maintenance (PPM) across electrical distribution boards, lighting circuits, HVAC plant, fire alarm panels and emergency lighting at multiple council sites, working to 18th Edition wiring regulations throughout.
- Diagnose and repair faults on BMS, LV switchgear, motor control circuits and pump systems using PAT testers, insulation resistance testers and thermal imaging cameras on site.
- Apply LOTO isolation procedures to BS 7671 on every live system intervention. Over 50 safety inspections completed with a zero-incident record maintained.
- Attend reactive call-outs and emergency electrical failures, restore service on site, 95% of incidents resolved within 3 hours.
- Carry out EICR visual condition inspections and log findings on the CAFM asset management system to support compliance and remediation scheduling.
- Complete LED lighting retrofits, socket outlet replacements, cable containment installation and minor works to IET wiring regulations. Over 150 PPM tasks completed and average system downtime reduced from 4 hours to under 1.5 hours.

Coordination and Supervision

- Work alongside facilities managers and contractors to schedule planned works so that disruption to council services and building users is kept to a minimum.
- Run toolbox talks, update risk assessments and keep COSHH and safe system of work documentation in order so the team stays compliant with HSE requirements.
- Track recurring fault trends and put forward corrective maintenance changes that cut reactive work orders by 25% across a 6-month period.
- Monitor equipment performance and flag adjustments to operational parameters that contributed to a 20% improvement in energy efficiency across managed facilities.

Electrical Engineer / Technical Support

Pilot Science Company Limited | Lagos, Nigeria | *January 2020 to September 2023*

Field Work

- Installed, tested and commissioned DC power systems, rectifiers, battery banks and hybrid energy solutions at telecoms BTS sites and data centres to OEM specifications and telecoms power infrastructure standards.
- Carried out transformer installation, termination and commissioning work at distribution substations, covering HV/LV cable jointing, busbar assembly, protection relay setting and oil-filled transformer maintenance to DILO/DILB procedures.

- Deployed and commissioned solar PV systems at off-grid and hybrid BTS sites including panel mounting, string wiring, inverter configuration and battery energy storage (BESS) integration across more than 500 sites.
- Performed electrical testing and commissioning covering insulation resistance, loop impedance, earth fault testing, relay functional checks and load bank testing on critical power infrastructure.
- Worked on the grid connection interface for a 120MW BESS project, attending site, reviewing as-built drawings and overseeing HV equipment testing and energisation in line with UDFS compliance protocols.
- Conducted energy audits at telecoms facilities and industrial sites, physically inspecting rectifiers, UPS systems, generators and cooling loads. Upgrades delivered 15 to 20% improvements in energy efficiency.
- Configured and optimised SCADA, PLC and DCS systems for remote monitoring of telecoms power infrastructure and substation automation, cutting fault response times and improving operational visibility.

Coordination and Supervision

- Led field teams on multi-site substation and telecoms power projects, organising crew schedules, managing material logistics and reporting progress against project milestones.
- Supervised HV/LV installation teams daily, running briefings and toolbox talks and keeping the programme on track to quality and safety standards.
- Handled grid connection approvals with regulatory bodies and utilities, making sure all UDFS requirements were met ahead of each energisation date.
- Reviewed electrical drawings, method statements and inspection test plans (ITPs) for substation and BTS power projects before site work began.

Electrical Engineer (Substation Operations and Maintenance)

Transmission Company of Nigeria (TCN) | 330/132kV Substation, Osogbo, Nigeria | *April 2017 to December 2019*

Control Room and PC&M Operations

- Worked in the Protection, Control and Metering (PC&M) department calibrating and testing protection relays including overcurrent, differential and distance types, checking CT/VT ratios and updating relay coordination settings on 330/132kV equipment.
- Stationed in the substation control room carrying out system monitoring, load data analysis and HV switching operations under senior engineers, contributing to a 99% system reliability record.
- Inspected and maintained high-voltage equipment including power transformers, circuit breakers, isolators, busbars and instrument transformers to TCN and IEC standards.
- Took part in earth fault testing, insulation resistance testing, transformer oil sampling for dissolved gas analysis and protection scheme functional tests. All results recorded in the station log.
- Assisted with substation automation upgrades including SCADA data point configuration, RTU commissioning and communication circuit testing between the control room and remote panels.
- Helped prepare method statements, outage requests and switching schedules for planned maintenance on 132kV and 33kV systems.

Reporting and Development

- Wrote technical reports on substation condition assessments and helped senior engineers put together maintenance improvement recommendations for the national grid operations team.

EDUCATION

MSc Robotics and Automation | University of Salford, Manchester | 2023 to 2024

BEng Electronics and Electrical Engineering | Osun State University, Nigeria | 2011 to 2016

NVQ Level 3, Electrical and Electronic Engineering (City and Guilds) | *In progress*

PROFESSIONAL CERTIFICATIONS AND MEMBERSHIPS

- PGD in Project Management, Chartered Institute of Project Management
- Certificate in Energy Audits and Energy Efficiency, Nigerian Society of Engineers (NSE)
- Certificate of Proficiency in Facility Management, Chartered Institute of Project and Facility Management
- Certified Huawei FusionSolar, Jubaili Bros Solar

- Data Analysis in Excel and Full Stack Data Scientist, DataCamp and 10alytics
- ACICPFM | GIEEE | MNSE

TECHNICAL SKILLS

HV/LV Systems: 330/132/33kV substation operations, HV switching, transformer installation and maintenance, cable jointing, busbar systems

Telecoms Power Infrastructure: DC power systems, rectifiers, battery banks, UPS, hybrid energy, BTS site power, data centre power systems

Renewable Energy: Solar PV installation and commissioning, BESS, off-grid and hybrid systems, inverter configuration, string wiring

Protection and Control: Relay calibration and testing (overcurrent, differential, distance), SCADA, PLC, DCS, RTU commissioning, PC&M

Testing and Compliance: Insulation resistance, loop impedance, earth fault testing, EICR, BS 7671 / 18th Edition, LOTO, HSE, IEC standards

Software and Tools: AutoCAD, MATLAB/Simulink, Proteus ISIS, Python, SQL, Tableau, CAFM systems

ADDITIONAL INFORMATION

Driving Licence: Full UK Driving Licence (clean)

Languages: English, native speaker

Interests: Power engineering, renewable energy, smart grids, sustainable infrastructure, IoT in energy management
